

LBF Assistant - Conversation Flow Diagrams

Overview

This document presents five conversation flow diagrams illustrating how LBF Assistant handles common user interactions. Together, these flows demonstrate the assistant’s behavior across greeting, successful task completion, clarification handling, error handling, and conversation closure, while showcasing three of the assistant’s four sub-systems (Quiz Creation, Study Plan Recommendation, and Concept Explanation) to reflect the breadth of the overall architecture.

#	Scenario	Sub-system Illustrated
1	Greeting	General (applies to all sub-systems)
2	Successful Request	Quiz Creation
3	Clarification	Study Plan Recommendation
4	Error Handling	Concept Explanation
5	Closing Conversation	General (applies to all sub-systems)

1 Greeting Flow

Applies uniformly across all sub-systems, per the global **<Greeting>** rule (greet once, at the start of the conversation only).

2 Successful Request Flow - Quiz Creation

Illustrates the complete path: the user provides a valid document, valid parameters, and receives a quiz.

3 Clarification Flow - Study Plan Recommendation

Illustrates how the assistant handles an ambiguous or incomplete request, prompting the user for missing information before proceeding.

4 Error Handling Flow - Concept Explanation

Illustrates how the assistant rejects an irrelevant or insufficient document and guides the user toward a valid submission.

5 Closing Conversation Flow

Illustrates the assistant's boundary enforcement: it stays alert for attempts to override its rules or scope, refuses such requests without exception, and remains available to help with any allowed request.
